EXPERIENCE

Software Engineer Intern — BigBlue Technologies

Jan 2026 – Present

Remote, Costa Mesa, CA

- BigBlue had no public marketing presence, built and launched 5 production landing pages (thebigblue.app) by hand-coding responsive pages with the UI designer, CEO, and technical founder, now the company's primary marketing site.
- The iOS app shipped with production bugs, debugged and fixed ~1,000 lines in Xcode, with every change reviewed and approved by the technical founder, then merged to production.
- An unverified MVP risked a rough launch, tested the app end to end and documented bugs before release, contributing to a smoother launch.

Software Engineer Intern — Biztech Consulting & Solutions

Aug 2022 – Oct 2023

Ahmedabad, India

- Users needed document pricing tied to content, built the frontend for a document-upload tool that auto-priced files by word count, wiring the UI to REST APIs with JavaScript and Redux.
- A client project required reliable changes, shipped through a Git-based review process with mentor approval before merging to main, contributing to real client testing.

Frontend Developer Intern — Elsner Technologies

Jul 2022 – Aug 2022

Ahmedabad, India

- Converted Figma mockups into responsive, standards-compliant HTML5/CSS3 pages.

PROJECTS

Real-Time Chat Application

Jan 2025 – Apr 2025

React, Node.js, Express, Socket.IO, MongoDB | [Live Demo](#) | [GitHub](#)

- Users wanted instant 1:1 messaging, built real-time messaging with React and Socket.IO using a server-side userId-to-socket map for targeted delivery and live online/offline presence, so messages reach the right recipient instantly.
- Accounts needed protection in the browser, implemented JWT authentication in httpOnly cookies with bcrypt hashing and a protectRoute middleware on every API call, blocking XSS token theft and unauthorized access.
- Storing images in the database would bloat it, integrated Cloudinary for image uploads and persisted only the secure URL in MongoDB, keeping the database light and offloading delivery to a CDN.
- The app needed to reach real users, deployed on Render with GitHub auto-deploy, with Express serving the React build in production, giving a live, continuously deployed app.

Full-Stack Telehealth Platform — NASA Fitness

Jan 2026 – May 2026

React, .NET Web API, SQL Server, Azure DevOps

- Patients could only get chiropractic care in person on a 7-year-old legacy system, built a full-stack telehealth platform from scratch (React + .NET Web API) that lets patients book and attend consultations online, replacing the in-person-only workflow.
- Intake needed to be compliant and low-touch, built HIPAA consent workflows (digital signatures, audit trails, right-to-revoke) with automated physician clearance via the RingCentral API and appointment booking through Acuity Scheduling webhooks, automating the full booking-to-clearance flow.
- Staff and patients needed separated, secure access, implemented JWT authentication with role-based access across 4 user roles, so each role only sees what it should.
- Delivered the product end to end, turned stakeholder requirements into specs and tracked delivery in Azure DevOps with Git across a multi-developer team, shipping the data model, REST API, and React UI.

SKILLS

Languages: TypeScript, JavaScript (ES6+), C#, SQL

Frontend: React, Redux, Tailwind CSS

Backend & APIs: Node.js, Express, REST APIs, .NET Web API, Socket.IO real-time, JWT authentication

Databases: PostgreSQL, MongoDB, SQL Server

Deploy & Integrations: Git, CI/CD (GitHub Actions), Azure DevOps, Render, Docker; RingCentral, Acuity, Cloudinary

EDUCATION

M.S. in Computer Science - University of Houston—Clear Lake, Houston, TX

Aug 2024 – May 2026

B.Tech in Computer Science - Silver Oak University, India

Graduated 2024

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Architect Associate • Model Context Protocol (Anthropic) • Claude Code in Action (Anthropic)
